**Fig 333: Roller Support**

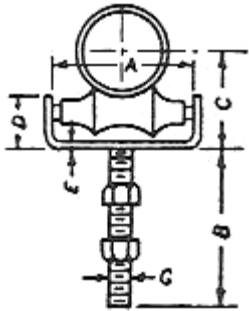

**Service Application:**

The adjustment of the pipe line is had by turning the top nut which raises or lowers the pipe to desired pitch. The lower nut is then tightened locking support into position and prevents loosening due to vibration. To select the correct size Roller Support for use with Covered Piping and Pipe Covering Protection Saddles, refer to sizes shown in [Fig 142](#) table.

**Ordering:**

Order by size and figure number. Made special to customer order. Dimensions in inches.
